

## Amphenol Trackwise REACH Statement

### Substance registration

Amphenol Trackwise is classed as a “Downstream User” a producer of articles. As these Articles do not contain substances that are “intended to be released” we are not required to register them. Therefore, Amphenol Trackwise does not have registration obligations.

Registration of formulations or substances used in the manufacturing of these Articles is the duty of our upstream suppliers. Our suppliers have confirmed that all necessary registration has taken place. Amphenol Trackwise is in continued contact with our supplier to ensure all registration issues are up to date.

As a downstream user, Amphenol Trackwise has the right to make its uses known to its suppliers, so that the suppliers can include these uses in their chemical safety assessments as “identified” uses, or pass the request up the supply chain. In doing so, they provide sufficient information to allow their supplier to prepare an exposure scenario.

### Information in the supply chain

Amphenol Trackwise will communicate information on dangerous substances and preparations down the supply chain, through SDS's. Amphenol Trackwise will also communicate information up the supply chain when new information is gained on hazardous properties of the substance or the appropriateness of risk management measures in the SDS supplied to them.

### Substances subject to authorisation

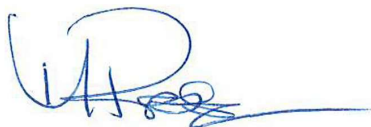

Amphenol Trackwise may use a substance for an authorised use provided it obtains the substance from a company that has received an authorisation for this use and it is used within the conditions laid out in that authorisation. The information on the uses covered by the authorisation and any applicable conditions must be provided by the supplier.

### Substances subject to restriction

Substances that are included in the Candidate List have been identified as Substances of Very High Concern (SVHC). These substances may have very serious and often irreversible effects on humans and the environment. Substances on the Candidate List may subsequently become subject to authorisation by decision of the European Commission.

Amphenol Trackwise has contacted its suppliers and received confirmation that none of the products it has been supplied contain any substances present in the most recent version of the “candidate list of Substances of Very High Concern”.

Amphenol Trackwise is in continued communication with suppliers and will communicate any changes or new legislation.
